Introduction

InstallShield is the industry standard for authoring high-quality Windows Installer-based installations. InstallShield 2019 Express Edition helps you mitigate the risks of OSS code with a quick and easy scan of your daily build. You'll uncover OSS and IP compliance vulnerabilities before you ship, so your build becomes the first line of defense against future OSS data breaches.

InstallShield 2019 Express Edition also offers new features and enhancements that make it easy to use the latest technologies.

For the latest information about InstallShield 2019 Express Edition, including updates to these release notes, see the [online version of the InstallShield 2019 Express Edition release notes](#).

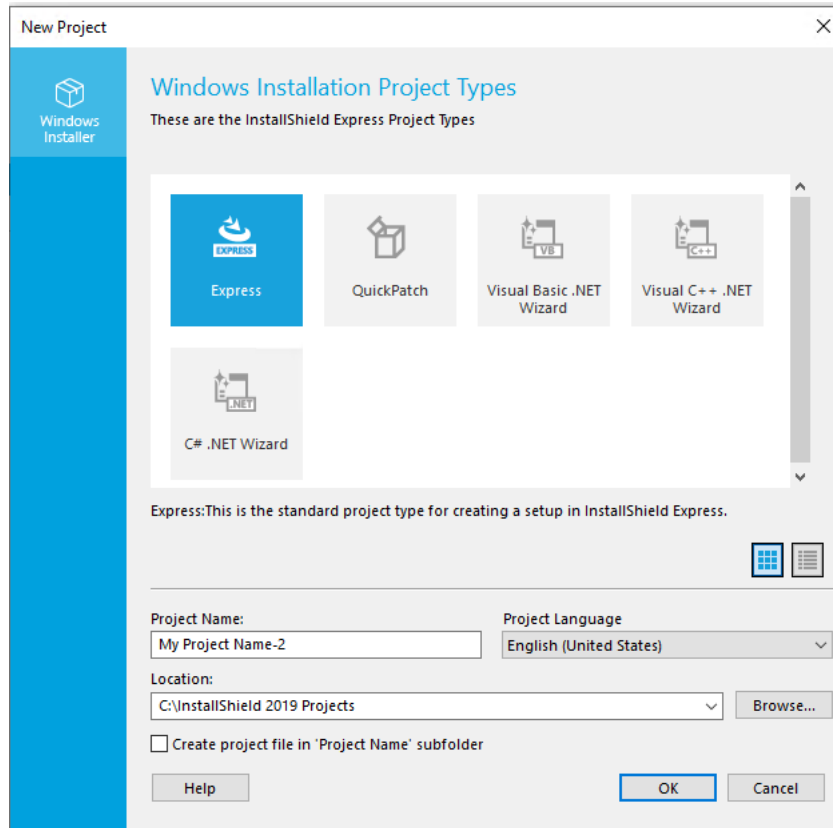

New Features

InstallShield 2019 Express Edition includes the following new feature:

- [New Project Wizard](#)

New Project Wizard

The New Project Wizard helps you to select different InstallShield Express project types with ease.

You can create different types of projects like Express, QuickPatch, Visual Basic.NET Wizard, Visual C++.NET Wizard, and C#.NET Wizard.

Enhancements

InstallShield 2019 Express Edition releases include the following enhancements:

- [InstallShield 2019 Express Edition](#)

InstallShield 2019 Express Edition

InstallShield 2019 Express Edition includes the following enhancements:

- [View Details of a Selected Certificate](#)
- [Add Predefined Install Conditions](#)
- [Update Default Server to SHA-2 Server](#)
- [Add Windows Server 2019 for Operating System Requirement](#)

View Details of a Selected Certificate

In InstallShield 2019 Express Edition, the details of the certificate like the general information of the certificate, security details and certification path is listed on the **View Details** option in the **Certificate Selection** dialog box.

Add Predefined Install Conditions

InstallShield 2019 Express Edition has a new predefined system search:

- Microsoft .NET Framework 4.6.2

If your installation requires the above, you can use the System Search view or the Installation Requirements page in the Project Assistant to add this system search to your project. When end users launch your installation, Windows Installer checks the target system to see if the requirements are met; if they are not met, the installation displays the error message that is defined for the system search.

Update Default Server to SHA-2 Server

In InstallShield 2019 Express Edition, if you select:

- SHA-1 to sign the package, the package will get time timestamped using:
 - `<DigitalSignature Timestamp="http://timestamp.verisign.com/scripts/timestamp.dll"/>`
- SHA-256 to sign the package, the package will get time timestamped using:
 - `<DigitalSignature TimestampRFC3161="http://sha256timestamp.ws.symantec.com/sha256/timestamp"/>`

Add Windows Server 2019 for Operating System Requirement

In InstallShield 2019 Express Edition, you can add an option for Windows Server 2019 in the operating system requirements section. You can set the appropriate Install Condition in the project by selecting or deselecting the option.

Additional Prerequisites Included

InstallShield 2019 Express Edition includes the following additional prerequisites:

- [Microsoft .Net Core 2.1 Runtime Prerequisite](#)

Microsoft .Net Core 2.1 Runtime Prerequisite

InstallShield now includes the prerequisites for Microsoft .Net Core 2.1 Runtime in the redistributables view.

Note • This change was tracked in issue IOJ-1896156.

Important Information

Note the following important information regarding the InstallShield 2019 Express Edition release:

- [Evaluating InstallShield](#)
- [Obtaining the Installations for InstallShield, InstallShield Add-Ons, and the Redistributable Files](#)
- [Installing More than One Edition of InstallShield](#)
- [Installing More than One Version of InstallShield](#)
- [Removal of .NET/J# Tab from the Releases View](#)

Evaluating InstallShield

If you have not purchased a license for InstallShield, you can install it and use it for a limited number of days without activating it or connecting it to a license server. When you use InstallShield before activating it or connecting it to a license server, it operates in evaluation mode, and some of its functionality is not available. For details, see [Functionality Notes for the Evaluation Version of InstallShield](#). Note that the evaluation limitations are removed when you activate InstallShield or when you connect it to a license server and check out a license for it.

Obtaining the Installations for InstallShield, InstallShield Add-Ons, and the Redistributable Files

The following installations are available for download from the Flexera Software Product and License Center as documented in the [InstallShield download and licensing instructions](#):

- InstallShield
- Redistributable files (for example, InstallShield prerequisites and InstallScript objects)
- Add-ons (if you are entitled to them) such as the Standalone Build and the InstallShield MSI Tools
- FlexNet Licensing Server software (if you purchased concurrent licenses and you need to set up your organization's license server)
- Skin Customization Kit
- InstallScript Object templates
- InstallShield service packs (if available)

Installing More than One Edition of InstallShield

Only one edition of InstallShield 2019—Premier, Professional, or Express—can be installed on a system at a time. In addition, the InstallShield 2019 DIM Editor cannot be installed on the same machine with any edition of InstallShield 2019.

Microsoft Visual Studio can be integrated with only one version of InstallShield at a time. The last version of InstallShield that is installed or repaired on a system is the one that is used for Visual Studio integration.

Installing More than One Version of InstallShield

InstallShield 2019 Express Edition can coexist on the same machine with other versions of InstallShield.

The InstallShield 2019 Express Edition Standalone Build can coexist on the same machine with other versions of the Standalone Build. In most cases, the Standalone Build is not installed on the same machine where InstallShield is installed. If you do install both on the same machine and you want to use the automation interface, review the *Installing the Standalone Build and InstallShield on the Same Machine* topic in the InstallShield Help Library to learn about special registration and uninstallation considerations.

Removal of .NET/J# Tab from the Releases View

The **.NET/J#** tab in the **Releases** view of the Installation Designer was originally provided to support .NET 1.1/2.0 and J# redistributables. Those technologies have become obsolete and no longer supported by Microsoft. Therefore, in InstallShield 2019 Express Edition, the **.NET/J#** tab of the **Releases** view has been removed (as well as the associated .NET 1.1/2.0 Core Language and .NET 1.1/2.0 Language Packs dialog boxes).

Project Upgrade Alerts

The following information describes possible upgrade issues that may occur when you upgrade projects that were created with InstallShield 2016 and earlier to InstallShield 2019. It also alerts you to possible changes in behavior that you may notice between new InstallShield 2019 projects and projects that are upgraded from InstallShield 2016 or earlier to InstallShield 2019.

- [General Information about Upgrading Projects that Were Created in Earlier Versions of InstallShield](#)
- [Changes to the List of Supported Versions of Windows for Target Systems](#)
- [Localized String Considerations](#)

General Information about Upgrading Projects that Were Created in Earlier Versions of InstallShield

If you use InstallShield 2019 to open a project that was created with an earlier version, InstallShield 2019 displays a message box that asks you if you want to convert the project to the new version. If you reply that you do want to convert it, InstallShield creates a backup copy of the project with a file extension such as .777 (for an .ism project) or .2016 (for an .issuite project) before converting it. Delete the .777 or .2016 part from the original project's file name if you want to reopen the project in the earlier version of InstallShield. Note that you cannot open InstallShield 2019 projects in earlier versions of InstallShield.

You can upgrade projects that were created with the following versions of InstallShield to InstallShield 2019: InstallShield 2016 and earlier, InstallShield 12 and earlier, InstallShield DevStudio, InstallShield Professional 7 and earlier, and InstallShield Developer 8 and earlier. Note that projects that were created with InstallShield MultiPlatform or InstallShield Universal cannot be upgraded to InstallShield 2019.

Changes to the List of Supported Versions of Windows for Target Systems

For all project types except for Suites, Windows XP SP3 and Windows Server 2003 SP2 are the minimum versions of Windows that are required for target systems that run the installations that are created in InstallShield. For suites (Advanced UI, and Suite/Advanced UI project types), Windows Vista and Windows Server 2008 are the minimum versions of Windows that are required for target systems.

Localized String Considerations

Changes to the handling and detection of localized strings were introduced starting in InstallShield 2016. For example, localized string content that includes square brackets around invalid characters can now trigger a build time warning or error. Accordingly, the following new warning and errors might occur when you are working with your installation.

Error or Warning Number	Message	Troubleshooting Information
-7355	The %4 value for string %2 does not meet validation criteria for table %1 column %3.	This warning occurs if a localized string value does not meet validation criteria for a column in the String Editor table. To resolve this warning, update the flagged value in the String Editor.
-7354	The %4 value for string %2 does not contain a legitimate value for table %1 column %3.	This error occurs if a localized string value does not contain a legitimate value in the named column of the String Editor table. To resolve this error, update the flagged value in the String Editor.

Resolved Issues

This section lists the customer issues that were resolved in the following versions of InstallShield:

- [InstallShield 2019 Express Edition](#)

InstallShield 2019 Express Edition

This section lists the customer issues that were resolved in InstallShield 2019 Express Edition.

Issue Number	Issue Summary
IOJ-1900586	ZLib 1.2.3 version vulnerability in InstallShield.
IOJ-1907614	.NET Framework 4.6.2 prerequisites do not have condition preventing install on Windows Server 2016.

Issue Number	Issue Summary
IOJ-1895875	Update Redistributable Downloader List.
IOJ-1911911	The Details page in the Redistributables view does not update for Prerequisites.
IOJ-1907284	InstallShield will crash after browsing for a merge module that has a dependency

System Requirements

This section contains the minimum requirements for systems that run InstallShield (the authoring environment), as well as for target systems that run the installations created with InstallShield (the run-time environment).

- [For Systems Running InstallShield](#)
- [For Target Systems](#)

For Systems Running InstallShield

InstallShield runs on the latest versions of these operating systems, fully updated with the most recent patches and service packs.

Item	Description
Processor	Pentium III-class PC (500 MHz or higher recommended)
RAM	256 MB of RAM (512 MB preferred)
Hard Disk	750 MB free space
Display	Designed for XGA resolution at 1024 × 768 or higher
Operating System	<ul style="list-style-type: none"> • Windows Vista • Windows Server 2008 • Windows 7 • Windows Server 2008 R2 • Windows 8 • Windows Server 2012 • Windows 8.1 • Windows Server 2012 R2 • Windows 10 • Windows Server 2016

Item	Description
Privileges	Administrative privileges on the system
Mouse	Microsoft IntelliMouse or other compatible pointing device
Optional Integration with Visual Studio	<p>The following versions of Microsoft Visual Studio can be integrated with InstallShield Premier or Professional Editions:</p> <ul style="list-style-type: none">● Visual Studio 2008● Visual Studio 2010● Visual Studio 2012● Visual Studio 2013● Visual Studio 2015● Visual Studio 2017● Visual Studio 2019 <p>The following editions of these versions of Visual Studio can be integrated with InstallShield Premier or Professional Editions:</p> <ul style="list-style-type: none">● Community● Professional● Premium● Ultimate

For Target Systems

Target systems must meet the following minimum operating system requirement:

- Windows XP SP3
- Windows Server 2003 SP2
- Windows Vista
- Windows Server 2008
- Windows 7
- Windows Server 2008 R2
- Windows 8
- Windows Server 2012
- Windows 8.1
- Windows Server 2012 R2
- Windows 10

- Windows Server 2016

Target systems must also support the SSE2 instruction set.

Known Issues

For a list of known issues, see https://flexeracommunity.force.com/customer/articles/en_US/INFO/InstallShield-2019-Express-Edition-Known-Issues.
